PT Mobilization Table

The PT Mobilization Table is shown with oxblood upholstery and a beige base

The Hill Adjustable Model 90PT electrically adjusts in height to offer easy access for your patients and minimize back strain for you. Its three-section top is designed specifically for physical therapists and includes features for examination, mobilization, and therapy.

The gas spring-powered lift-back allows you to position your patients with ease and locks instantly at any angle. An electric back is also available (see reverse side). The tilting headpiece on the 90PT can be locked in any position from 35° positive to 85° negative. For patient comfort, the entire 90PT is padded with 2 1/2" of medium-density foam. A padded insert fills the face cut-out when needed. The foot pedal can be conveniently positioned on either side of the table. A durable telescoping base safely encloses all mechanical parts. The PT

Mobilization Table has a one-year warranty on all parts and labor and is UL® approved.

Patient Positioning

The 90PT is designed to give you great flexibility when positioning your patient. With the touch of the foot pedal, it adjusts quietly and smoothly from 22" to 35" providing the ideal working height within 16 seconds.

The 90PT conveniently converts to a flat-top table for supine or prone use.

Swing-out armrests provide arm support for your patients in the prone position and rotate under the table top when not in use.

- See other side for more details -

90PT Features

The PT Mobilization Table is available with the options pictured below. They include adjustable-height armrests which, when raised, are flush with the table top; a rocker foot pedal mounted to the base to provide height adjustment from either side of the table; and a caster system allowing easy movement of the 90PT around the office. The PT Mobilization Table is also available with an optional electric back (not pictured).
